

WINNER REWARDED: In Zeist, The Netherlands—Prof. Fritz Zernike, 65, of Groningen, received a microscope Tuesday night from Dr. C. E. Bleeker, left, director of the factory which made the instrument that brought Zernike the 1953 Nobel Prize in

physics. Zernike developed the color-phase microscope which eliminates the need for staining specimens. The 1953 chemistry prize went to Dr. Hermann Staudinger, a German, for synthetic fibers which assisted the plastics industry.—A. P. wirephoto.
